50% UMAXX® & 25% Duration®

Professional turf fertilizer for fairways.

Mini fairway grade (SGN 145)

## Product Features

- 50% of the nitrogen is from UMAXX® stabilized nitrogen. UMAXX® contains two inhibitors that reduce nitrogen loss to ammonia volatilization and nitrate leaching.
- 25% of the nitrogen is derived from Duration CR® polymer-coated urea. Duration CR® slow-release nitrogen offers durable coating technologies that provide precise, extended feeding.

## Turf Benefits

- According to research, at least 30 percent of the nitrogen from urea can be lost to the atmosphere through volatilization within days of application.
- Urease inhibitor in combination with the nitrification inhibitor in UMAXX® urea significantly increases nitrogen absorption by turfgrass to provide uniform growth, deep root mass and consistent color intensity over 12 to 16 weeks.
- UMAXX® performs consistently regardless of soil temperature or weather.
- Duration CR® fertilizers release nitrogen slowly and continually throughout the plant's growth cycle, resulting in precise, predictable feeding that lasts for weeks. Duration CR® will take the worry out of maintaining healthy turf while giving you the exceptional performance you demand.
- Designed for use on tees and closely mowed fairways. Mini-sized particle provides excellent distribution at lower application rates.

### Directions For Use

- Read the entire label before use.
- Apply only as directed during the growing season.
- Apply only to dry foliage.
- Irrigate immediately after application, especially during periods of high temperatures (80°F or above). Watering after application will accelerate initial green-up and aid the product's penetration into the turf canopy.
- Nutrite encourages responsible use of our products. Help do your part in protecting our rivers and lakes by following label indications and cleaning driveways and walkways after application. Do not apply to frozen ground.
