Weed seed inhibitor & lawn fertilizer with 90% corn gluten meal

Product Features

- Prevents crabgrass, dandelion, and white clover seeds from germinating in residential lawns.
- Organic based, phosphate-free.
- Contains slow-release nitrogen for prolonged fertilization.
- Homogeneous for uniform distribution of nutrients.
- Gluten is a protein found in the periphery of the corn kernel that remains after removing the starch.
- All the potassium is in the safer sulphate form.

Turf Benefits

- Gradually feeds over a period of two to three months. In the U.S.A. corn gluten has demonstrated herbicidal effects on certain lawn weeds. It inhibits the initiation of new roots at the time of weed seed germination.
- The organic matter improves the water holding capacity of the soil and enhances microbial activity.
